

2023 Nissan Ariya

Jump Starting Procedure

**** If done incorrectly, jump starting can lead to a 12-volt battery explosion, resulting in severe personal injury or death. It could also damage your vehicle.**

Jump Starting Procedures:

1. If the booster battery is in another vehicle (B), position the two vehicles (A and B) to bring their 12-volt batteries into close proximity to each other. **DO NOT** allow the two vehicles to touch.
2. Apply the parking brake. If the 12-volt battery is discharged, the power switch cannot be moved from the OFF position.
3. Connect the jumper cables to the booster vehicle (B) before pushing the power switch.
4. Push the P (Park) position switch to place the vehicle in the P (Park) position.
5. Switch off all unnecessary electrical systems (headlights, heater, air conditioner, etc.).
6. Place the power switch in the OFF position.
7. Remove the vent caps (if so equipped) on the 12-volt battery.
8. Connect jumper cables in the sequence as illustrated (01 ®02 ®03 ®04).
